Solar Fairy Lights - 200 LED White Icicle

INSTRUCTION MANUAL

Model No. EL6058

Please read carefully before use and keep for future reference

Dear Customer

Thank you for purchasing the Solar Fairy Lights.

Give your garden, driveway, patio or porch an after dark makeover with this fabulous 200 LED icicle light set. Solar-powered (so no electricity costs and no wiring either) the integral batteries are charged during the day via the solar panel. Designed for all weather conditions and all-year round use, the lights automatically switch on at dusk and off at dawn.

PARTS

Please ensure that all parts are included before assembling.

1. Solar Panel with LED Strand
2. Ground Tube
3. Pointed Ground Stake

BEFORE USE

- The solar panel must be placed in a sunny location where it will receive the maximum amount of sunlight during the day.
- Any cover that shades the solar panel will affect its ability to absorb sunlight and decrease the level of brightness and duration of time the LEDs will be on.
- The selected location should not be near an artificial night light source such as porch lights, street lights etc. as they may prevent the solar lights automatically turning on.

ASSEMBLY

- The solar panel can be positioned in to the ground with the supplied tube and stake by following the steps below. When installing, ensure the stake is pushed firmly in to the ground.
- DO NOT push down on the Solar Panel as it could cause damage.

1. Place solar panel on angled head and place in to ground tube.
2. Place ground tube on to pointed ground stake and ensure it is firmly in place.
3. Holding the ground tube, push the pointed ground stake firmly in to the ground.
4. Position the lights.
5. Turn the lights on.

- The lights have 3 settings:
 On - Steady Light
 Off
 Flashing - Flashing Light with 8 frequencies

REPLACING THE BATTERY

- Unscrew and take off the bottom of the solar panel.
- Remove the old battery and replace with the new one.
- The new battery should be of the same kind and size, ensure that the polarity of the battery is correct.

CARE AND MAINTAINENCE

- The solar panel should be cleaned periodically to ensure its efficiency is not reduced by dust and dirt.
- Wipe clean with a soft Dry cloth. Never use scourers, abrasives or chemical cleaners. Do not allow moisture to come into contact with electric parts.
